INDEX TO SCIENTIFIC NAMES CITED IN TAXON

VOLUME 33, 1984

Family names given originally in languages other than Latin have been treated as though they were in Latin.

All appearances of scientific names have been included in the index, including names used in figures and in figure captions.

New scientific names and combinations are indicated by appropriate abbreviations following the entries; indicating them by underlining, as has been done in the past, proved to be unduly difficult with the computer program used for this index.

Genera that were in the original preceded by X, to indicate a hybrid genus, are listed here without the X, because of the limitations of the sorting functions of the computer program.

Compiled by:

Neil A. Harriman

United Kingdom
Liverpool—University of Liverpool, Botanic Gardens, Ness, Neston South Wirral L64 4AY, England

The Annonaceae Project

The announcement of this project (Taxon 32: 528–529. 1983) has attracted the interest of many botanists in various fields of systematic botany, resulting in an increase of activities and in several more collaborators joining the group. A summary of what has been accomplished since, and a survey of our planning for the near future, is presented here in order to inform our colleagues and to invite still others to participate.

Publications. A worldwide monograph of the genus *Anaxagorea* has been completed and will be published in *Botanische Jahrbücher* by the end of this year. Along with the monographic work on *Anaxagorea,* a detailed study of the indument of the genus was made. The manuscript is now ready to go to press. A survey of the variation of wood and leaf anatomical characters in Annonaceae down to the genus level is almost finished. The wood anatomy covers the whole world, while the leaf anatomy deals with the Neotropics. Finally, a comprehensive bibliography of over 2000 titles, including taxonomy, anatomy, palynology, flower and fruit ecology, karyology, fossils, chemistry, uses, phylogeny, and nomenclature is nearly completed. This bibliography will be published probably by the end of this year to serve all scientists working in this family.

Revisions. The following genera have been selected for revision within the next three years: *Tetrameranthus, Rollinia, Rolliniopsis,* and *Duguetia.* The genus *Xylopia* is scheduled for revision between 1984 and 1990. The paleotropical species of *Xylopia* will be treated by S. Douglas for her Ph.D. thesis. This work will be carried out at the Rijksherbarium, Leiden. E. Grothe will prepare a first survey of the African *Xylopia* species during an extended visit to the herbarium at Paris in the second part of this year. The revision of neotropical *Xylopia* is planned to start by 1987; this will be under the responsibility of Paul J. M. Maas and L. Y. Th. Westra. The species from central and southern Brazil are already under treatment by Marilda Carvalho Dias (Campinas).

In close cooperation with the team at Utrecht University, W. Morawetz (Vienna) has started a revision of *Annona.* N. Murray (Ann Arbor, Michigan) will have completed a revision of *Porcelia* and *Cymbopetalum* by the end of next year. Finally, G. Schatz (Madison, Wisconsin) plans to start with monographic work on *Sapranthus, Desmopsis,* and *Stenanona.*

Regional Treatments. H. León (Bogotá) is now working at Utrecht for 10 months studying the taxonomy of *Duguetia, Anaxagorea. Raimondia,* and *Rollinia* for the *Flora of Colombia.* In 1985, one of the staff members at Utrecht will revise the Annonaceae for the *Flora of the Lesser Antilles.* A treatment of this family for the *Flora of Paraguay* by R. Spichiger (Geneva) has recently been published.

Meeting. To discuss the future of this project, a meeting will be held at Utrecht from 10–12 December 1984. Various collaborators have made arrangements to come to Utrecht, among them A. Le Thomas (Paris; pollen morphology), A. Cavé and/or M. Leboeuf (Paris; chemistry), W. Morawetz (Vienna; taxonomy, karyology), P. Kessler (Hamburg; taxonomy), G. Gottsberger (Giessen; flower and fruit ecology). Any botanist interested in cooperation or interested in joining this small meeting is welcome.

Collection. A field trip to collect material is scheduled for October and November of this year. Five botanists from Utrecht University will explore several localities in the tropical lowland forest of the Amazonian region of Peru.

Other Studies. Utrecht University has made available funds for a four-year period to study fruit and seed morphology of Annonaceae. A young scientist will be appointed to this at Utrecht in the second half of 1984. The study will be carried out in close cooperation with M. Christmann (Kaiserslautern).

Miscellanea. Any scientist interested in participating in this project will be welcome. Botanists exploring in the field, particularly in the Neotropics, are kindly requested to collect material of Annonaceae. A duplicate set is highly appreciated and will be identified as soon as possible. Samples for study of pollen, chromosomes, wood, and chemistry are also welcome. Please, write for particulars concerning special collecting techniques.

For information, write to: Paul J. M. Maas, Institute of Systematic Botany, P.O. Box 80.102, 3508 TC Utrecht, The Netherlands.

Tom Harris Studentship

Following the death of *Tom M. Harris,* Paleobotanist at the University of Reading, a group of his friends and colleagues have established a fund in his memory. It has been suggested that this might be used to set up a studentship for assisting Botany or Biology students to do botanical fieldwork. Contributions can be sent to the Tom Harris Fund, Botany Department, Plant Science Laboratories, The University, Whiteknights, Reading RG6 2AS. Cheques should be made payable to "University of Reading." If anyone finds it easier to make payment from a US$ account, then the cheque should be made payable to W. G. Chaloner. All cheques should be endorsed on the back for The Tom Harris Fund. Any sum would be a welcome contribution.
